## Materials Simulations in NESAP

Soham Ghosh Application Performance Group July 26, 2022

2022 CSASP

### Materials simulations: Overview

- What we do
- DFT, GW, ML
- Computational challenges
- Programming models

### Simulation: What can it do?

bulk bands and dos 5 0 -5 ΝΓ ΡN 0.2 0.4 н El-ph interaction D 00 (eV)

### Phonon stability

# Stable Unstable

 $LaH_{10}$ 

SSG, YX, ZM, EM, PRB(2016) YQ, SSG, WEP PRB (2019), MG and JG JCTC (2015)

**GWLDOS** 

### QE: High-Throughput DFT

- Fortran-based
- MPI+openMP+libraries
- CUDA, cuBLAS, cuLAPACK
- OpenACC
- CUDA-aware MPI

### Hsin-Yu Ko et. Al. (under preparation)

Code Blocks

### For constrained axpy, standard fortran is bad

 $Y = \alpha X + Y$ 

#### 10<sup>2</sup> $10^{1}$ GFLOPS Programming model 10<sup>0</sup> blas kernel loop openACC standard fortran 211 213 2<sup>15</sup> 217 219 29 n

OpenACC and cuf kernels are the best

### AXPY BLAS saturates quickly on CPU

### Thank You
